All types of computer network designs are based on same apparatus like server, hub, switch, router, and network adaptor. These network adaptors are now-a-days inbuilt in all the machines desired to be shared in networking. In peer-to-peer network only network cable is attached through the RJ45 port commonly known as NIC card and these two computers are making a network through cross cable. One ...

[Advanced Computer Networks | www.systems.ethz.ch](#)

Network Design . Computer networks also differ in their design approach. The two basic forms of network design are called client-server and peer-to-peer.Client-server networks feature centralized server computers that store email, web pages, files, and applications accessed by client computers and other client devices.

[What is computer networking? - Quora](#)

Network computing refers to the use of computers and other devices in a linked network, rather than as unconnected, stand-alone devices. As computing technology has progressed during the last few decades, network computing has become more frequent, especially with the creation of cheap and relatively simple consumer products such as wireless ...
