In *Troubled Dream*, Wailoo and Pemberton ask how twentieth-century medical science has interacted with the politics of race. Their new book examines medical research and public health initiatives that have targeted three genetic diseases associated with three specific ethnic and racial groups: Tay-Sachs disease among Jews, cystic fibrosis among whites, and sickle cell disease among African Americans. The comparison draws out productive questions about race, medicine, and genetics, on the ...

Respectively, the hereditary diseases Tay-Sachs, cystic fibrosis, and sickle cell diseases have been associated with Jewish Americans, white Americans, and African Americans. So it is that issues of genetic medicine related to these diseases understandably involve broad social questions "about the meaning of race and ethnicity, about the promise of innovation, about the ability of diverse ...
